DETAILED ACTION

Election/Restriction

1. Applicant's election without traverse of Embodiment 1 (Fig.1-3), claims 1-14 and 24-27 is acknowledged. However, the limitations in claim 8 are not in the elected Embodiment, so claim 8 has been withdrawn from consideration.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1, 2, and 10 are rejected under 35 U.S.C. 102(a) as being anticipated by Dani et al. (US 2003/0077478).

Regarding claim 1, Dani et al. discloses an apparatus comprising: a die (12), a heat spreader (14); and a thermal intermediate material (10) comprised of a plurality of carbon nanotubes (20) [0021] blended with solder [0013] interposed in a gap between the die and the heat spreader. See Fig.1-3.

Regarding claim 2, as shown in Dani et al.'s Fig.2, some of carbon nanotubes are chemically bonded to the solder.

Regarding claim 10, Dani et al. teaches that the solder is indium. See [0017]

Allowable Subject Matter

3. Claims 24-27 are allowed and claims 3-7, 9 and 11-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is an examiner's statement of reasons for allowance: Dani et al. appears to be the closest prior art reference. However, this reference fails to teach the following: some of carbon nanotubes are pre-coated with a metal prior to blending with solder (claim 3), some of carbon nanotubes are decorated with metal (claim 4 and claim 24), the nanotubes are randomly oriented in the thermal intermediate material and have average lengths less than about 10 % of the gap between the die and heat spreader (claim 9), the thermal intermediate material having properties as claimed in claim 11. Prior art of record fails to teach or suggest to incorporate these limitations into Dani et al. to arrive at the claimed device.
